**Ask us
about our
IFMS
Solutions**

Software Development Software Development is the process of writing and maintaining source code, but in a broader sense of the term it includes all that is involved between the conceptions of the desired software through to the final manifestation of the software.

- Custom software design and development.
- Software architecture.
- Database services / management.
- Conversions & migrations.
- Application planning and implementation.
- Application integration.
- ERP applications.
- Banking (core banking systems, payment solutions, delivery channels).
- Hospital management systems & solutions

E-Learning

E-Learning is defined as the electronic delivery of learning materials located either on a network (Internet or LAN) or on a personal computer (CD-ROM or DVD). Learning materials include videos, presentations, simulations, text, images and any format that can be electronically transmitted.

Combining the latest information technology and academic theories, SAMSER INNOVATIONS has pioneered a framework for implementing successful learning platforms. All existing advantages of learning have been enhanced by academic expertise and professional experience to create a comprehensive learning environment (i.e. virtual education).

- Learning Tools.
- Content Development.
- Collaborative Software.
- Educational Animation.
- Video Streaming.
- Multimedia.
- Virtual Classrooms.
- Training.

Website Design

- We build websites with professional, high quality graphics that match your business. Our webmasters create user-friendly and attractive websites that are both easy for clients and visitors to navigate through and easy for you to edit via a friendly control panel.
- Domain Name & Hosting.
- We offer flexible domain name and hosting plans.
- Website Management.
- Your website's updates, fixes and changes will be managed by our professional webmasters upon your request.

Preventive Maintenance

We provide different preventive maintenance plans. Our engineers will maintain your hardware and/or software in satisfactory operating condition by providing systematic inspection, detection, and correction of incipient failures before they occur or develop into major defects. Our plans include tests, measurements, adjustments, and parts replacement performed specifically to prevent faults and failures from occurring. Our engineers not only keep logs but they will also submit you with detailed reports accordingly.

Hardware			Software
• Case cleaning	• Headphones cleaning	• Mouse cleaning	• Driver downloads
• Disc drives cleaning	• Keyboard cleaning	• Printer cleaning	• Updates
• CD/DVD disc cleaning	• Laptop cleaning	• Scanner cleaning	• Anti-virus updates
• Fan cleaning	• LCD cleaning	• Motherboard cleaning	• Disk utility software (defrag, scan disk)
• Hard drive cleaning	• Monitor cleaning		

CCTV

Closed-circuit television (CCTV) is the use of video cameras to transmit a signal to a specific place, on a limited set of monitors. Surveillance cameras are the cornerstone of any professional security system. Our engineers provide the best solutions available for you to monitor your home or office. CCTV security camera systems allow you to control your surveillance from one central location via the included DVR. We offer a wide range of CCTV security camera systems from single camera to multi-camera that are suitable for all-weather options.

- Discreet Cameras
- Infrared/Night Vision
- Outdoor
- Day/Night Varifocal
- Network/IP
- Wireless
- PTZ/Speed Domes
- High-Definition Cameras
